Look at your costs

We spend money and often don't really think about it.

Look through your expenditure report at EVERYTHING you spend. Do you really need to spend it? Would you miss it if you didn't? What value and benefit does it give you?

For example, a contact told me recently he had been paying £700/month for SEO services that weren't delivering the results. He's now getting a better service for £95/month. That's more than £7,000 saved!

Apply this personally as well. That coffee you buy on the way to work every day means you have to earn £650/year before tax just to pay for your coffee...
